**IN THE CLAIMS**

---

1. (Currently Amended) A fishing sinker comprising:

an elongated body having a line connection end and a free end and having a buoyant section and a weighted section, said weighted section constructed of a weighted material having a density greater than that of water and being positioned closer to said free end than said buoyant section, and

a noise generating element non-detachably connected with said weighted section both during use and non-use at said free end by a non-detachable connection between said noise generating element and said weighted section so that said weighted section is between said buoyant section and said noise generating element, said noise generating element comprising a closed hollow member and a fixed number of noise generating objects moveable freely within said hollow member, said number of noise generating objects being fixed both during use and non-use.

2. (Original) The fishing sinker of claim 1 wherein said noise generating element comprises a hollow, generally tubular member and one or more noise generating balls movable freely within said tubular member.

3. (Original) The fishing sinker of claim 2 wherein said generally tubular member is constructed of metal.

4. (Original) The fishing sinker of claim 2 including two or more noise generating balls moveable freely within said tubular member.

5. (Canceled)

6. (Canceled)

7. (Canceled)

8. (Previously Amended) The fishing sinker of claim 1 wherein said weighted portion is comprised of a molded metal and said noise generating element is molded into said weighted portion.

 9. (Previously Amended) The fishing sinker of claim 8 including an exterior plastic seal coating covering substantially the entirety of said body and noise generating element.

10. (Canceled)

11. (Canceled)

12. (Previously Amended) The fishing sinker of claim 1 including a wire extending substantially through the entirety of said body wherein said wire has an end defining said line connection end.

13. (Canceled)

14. (Canceled)

15-19. (Canceled)

20. (Previously Amended) The fishing sinker of claim 1 including an exterior dip coating covering substantially the entirety of said body and noise connecting element.

21. (Canceled)

 22. (Canceled)

23. (Canceled)

24. (Canceled)

25. (Previously Amended) The fishing sinker of claim 1 wherein said hollow member is constructed of a material different than said weighted material.

26. (Currently Amended) A fishing sinker of unitary, one piece construction comprising:  
an elongated body having a line connection end and a free end, said body having a weighted section constructed at least in part of a solid weighted material having a density greater than that of water and being sufficiently weighted to cause the fishing sinker to sink in water, and  
a noise generating element non-detachably connected with said elongated body at said free end by a non-detachable connection so that the entirety of said weighted section is between said noise generating element and said line connection end and said noise

generating element is not removable from said elongated body, said noise generating element comprising a hollow member and a fixed number of noise generating objects moveable freely within said hollow member.

27. (Previously Added) The fishing sinker of claim 26 wherein said hollow member is a closed hollow member.

28. (Previously Added) The fishing sinker of claim 26 including an exterior dip coating covering substantially the entirety of said body and noise connecting element.

29. (Previously Added) The fishing sinker of claim 26 wherein said hollow member is constructed of a material different than said weighted material.

30. (Previously Added) The fishing sinker of claim 1 having a unitary construction.

31. (Previously Added) The fishing sinker of claim 1 wherein said line connection end includes a line connection eyelet.

32. (Previously Added) The fishing sinker of claim 1 wherein said weighted section is sufficiently weighted to cause the fishing sinker to sink in water.

33. (Canceled)

34. (Previously added) The fishing sinker of claim 26 wherein said line connection end includes a line connection eyelet.

35. (Canceled)

36. (New) The fishing sinker of claim 1 being free of any means for varying the size or weight of the sinker.

37. (New) The fishing sinker of claim 26 being free of any means for varying the size or weight of the sinker.

38. (New) A fishing sinker construction comprising:

a body having a line connection end and a free end, said body having a weighted section constructed at least in part of a solid weighted material having a density greater than that of water and being sufficiently weighted to cause the fishing sinker to sink in water; and

a noise generating element comprising a hollow member molded into said weighted section to define a closed, noise generating chamber which is non-detachable from said weighted section both during use and non-use; and

a fixed number of noise generating objects contained within said chamber, said noise generating objects being sufficiently small so that they are moveable freely within said chamber.

39. (New) The fishing sinker of claim 38 wherein said hollow member is constructed of a rigid metal different from said weighted section.

101

40. (New) The fishing sinker of claim 38 wherein said weighted material comprises a lead based material.
